✓ Written and Directed by Richard C. Kahn ✓

✓ Screen Adaptation by Howard Bradford ✓

✓ " CHILDREN OF LONELINESS " ✓
concerns itself with the story of those unfortunate members of society known as inverts whose sexual instincts have been misdirected to such an extent that they approach the state of degeneracy.

CHILDREN OF LONELINESS is an educational and scientific presentation of an absorbing subject that deals with the manifestations, evil associations and mental complexes that affect and misdirect normal adults into channels resulting in homo-sexuality. It points out in vivid form and manner the fact that it is an acquired anomaly requiring only the influence of some exciting cause to become manifest, among such causes being those associated with fright, improper training, evil associations and mental complexes. Through its sinister influences, it tells of the loss of every high ideal and noble instinct of an otherwise normal human being; it recalls the depths of shame and despair to which the victims inevitably sink. In their effort to satisfy their desires these unfortunate people often stoop to the most loathsome practices.

CHILDREN OF LONELINESS points out the part that Society plays in the development of normal children into normal humans, and eloquently brings out the potent fact that society cannot cure those who have been so misguided by simply ignoring and refusing to discuss them. The picture is a strong argument for open discussion of a subject that has been heretofore shrouded in ignorance and isolation. The story of these

inverts is a tragic one and reveals the known fact that these people are mentally sick and their only hope lies in treatment by competent physicians, but because these particular individuals are shunned by society, they do not know there is a cure for them, and as a result, medical science has little chance of winning out against a conspiracy of prudery and ignorance.
